

# OVERLOAD TESTING

from ALATAS Singapore

ALATAS supply water bags and load cells for both dynamic and static load tests for Marine Offshore & landbased cranes. ALATAS crane load tests are performed as per ALATAS designed protocols, matching the individual crane models set out by the manufactures. A certificate is issued upon successful completion.

Water bags are much easier and less expensive to transport, enabling ALATAS to pass the cost and time savings on to our clients.

## CRANE HEALTH CHECK UP

ALATAS engineers can carry out pre-testing and prepare the crane for load testing. This can include a full health check up if required.
