## NEWS STORY

Alatas Crane Service Worldwide a company with over 30 years experience and a Global out reach with 14 office globally has recently completed the purchase of 10 x 100Te water bags as part of a strategic plan globally to allow Alatas to offer Heavy Lift Crane Load Testing to the Marine, Offshore, DSV & Construction Vessels. The combination of the strategic locations of Alatas offices and the distribution of assets Alatas can offer Heavy Lift Load Testing to the major Shipping and Oil and Gas Hubs.

Alatas Eastern Hemisphere Managing Director Andreas Horntrich said: "The strategic investment in these assets is part of our wider Global Strategy allowing us to offer the complete testing & inspection turnkey solutions to our clients. The use of these larger bags in practice reduces the rig up time for a 300Te Load Test to 30 minutes when compared with traditional requirements for multiple water bags and spreader beams. Alatas is now positioned to carry out Heavy Load Testing during Port Calls with 2 tests being possible during a 24 hour period. This combined with our ability to carry out crane and rope inspections during the testing set up apart from our competitors."
